myCareSignals Cookies Policy

Last updated: 25 January 2026

1. Who we are

myCareSignals is a digital outcomes and key-working tool designed for children's homes and related care settings. This cookies policy explains how we use cookies and similar technologies when you visit our web application (for example, app.mycaresignals.com) and any related pages that link to this policy.

2. What are cookies?

Cookies are small text files that are placed on your computer, tablet or mobile device when you visit a website. They are widely used to make websites work, or work more efficiently, as well as to provide information to the owners of the site. Cookies can be "session" cookies (which are deleted when you close your browser) or "persistent" cookies (which stay on your device for a set period or until you delete them).

Cookies do not normally identify you directly, but they can store information such as your browser type, device settings, pages visited, and actions taken on the site. Some cookies are strictly necessary for the site to function, while others are used to understand how the service is used and to improve it over time.

3. Types of cookies we use

We use the following categories of cookies on myCareSignals. The specific cookies and their duration may change from time to time as we improve the service, but they will always fall within these broad categories.

3.1 Strictly necessary cookies

These cookies are essential for the secure and reliable operation of myCareSignals. Without them, you would not be able to log in or use core features. For example, we may use necessary cookies to:

- keep you signed in as you move between pages;
- route your requests to the correct server;
- remember your cookie preferences;
- help protect the site from misuse and unauthorised access.

3.2 Performance and analytics cookies

These cookies help us understand how the service is being used so that we can improve stability, performance and usability. For example, we may use analytics tools (such as privacy-conscious versions of web analytics) to collect aggregated information about:

• which pages are visited and for how long;
• which features are used most often;
• any error messages or performance issues users encounter.

The information collected via these cookies is aggregated and does not aim to identify individual users. Where analytics tools are provided by third parties, we ensure that appropriate data-protection safeguards are in place.

3.3 Functionality cookies

Functionality cookies allow the site to remember choices you make, so that your experience is more consistent and convenient. For example, they may be used to:

• remember your preferred home or service when you log in;
• store simple display preferences (such as chart views or date ranges);
• keep track of forms you have partially completed so you do not lose work if you navigate away.

3.4 Third-party cookies

In limited cases we may allow trusted third-party tools to set cookies when they are integrated into the platform. Examples could include security and error-monitoring tools, analytics services, or embedded content from partners. These third parties are required to use any information collected only for the purposes we have agreed with them and in line with data-protection law.

4. Cookies and personal data

Some cookies are linked with the user account you use to log in to myCareSignals. This means they may be treated as personal data under UK GDPR and related data-protection laws. Our lawful bases for using such cookies are usually our legitimate interests in providing, securing and improving the service, and, where required, your consent for non-essential cookies.

To understand more about how we handle personal data, your rights, and our legal bases for processing, please read the myCareSignals Privacy Policy.

5. Your cookie choices and controls

When you first access myCareSignals, we may present a simple notice explaining that we use cookies. In some deployments we may also provide a banner or settings panel that allows you to accept or reject certain categories of cookies (for example, analytics cookies) while allowing strictly necessary cookies that are required for the service to function.

You can also control cookies through the settings available in your web browser. These controls typically allow you to:

- see which cookies are stored on your device;
- delete cookies individually or all at once;
- block or limit cookies from specific sites;
- configure your browser to notify you when a website wants to store a cookie.

The exact steps vary by browser and device. Independent resources such as www.aboutcookies.org and www.allaboutcookies.org provide clear guidance on managing cookies. Please note that if you choose to block or delete certain cookies, some features of myCareSignals may not work properly or you may not be able to access the service at all.

6. Cookies on devices used by children and young people

myCareSignals is designed for use by staff teams in children's homes and related services, not directly by children. However, we recognise that young people's information is highly sensitive. We therefore aim to keep our use of cookies proportionate and focused on running and improving the service for professional users.

7. Changes to this policy

We may update this cookies policy from time to time to reflect changes to the service, legal requirements or technical developments. When we make significant changes, we will update the "Last updated" date at the top of this page and, where appropriate, provide additional notice within the application.

8. How to contact us

If you have any questions about how we use cookies on myCareSignals, or about this policy, please contact us using the contact details provided in our main Privacy Policy or via the contact route supplied by your organisation's deployment of myCareSignals.
